SUMMARY

Full Stack AI Engineer experienced in building production-grade web and AI products, from e-commerce and payment systems to agentic AI and real-time voice applications. Skilled in React, Next.js, NestJS, PostgreSQL, and AI integrations, with a strong focus on end-to-end product development, scalability, and turning emerging technologies into practical business solutions.

EXPERIENCE

Full Stack AI Engineer

Strawberry Labs

June 2025 - July 2026, Dubai (Remote)

- Delivered core commerce infrastructure for Parkabox, enabling customers to complete purchases and manage subscriptions through end-to-end basket, checkout, order, and subscription workflows.
- Enabled secure payment processing and streamlined financial operations by integrating Stripe and TotalPay, implementing payment reconciliation workflows, and automating transactional email notifications.
- Helped transform Berrydesk's agentic AI research into product capabilities by evaluating orchestration approaches with Parlant and implementing structured agent behavior and autonomous workflows within the AI backend.
- Expanded Berrydesk into real-time voice-based customer support by architecting SIP connectivity and low-latency conversational pipelines using Pipecat, WebRTC, and Twilio.
- Improved the responsiveness and technical viability of voice AI interactions by optimizing VAD, TTS, STT, and LLM latency and benchmarking providers to inform technology and vendor selection.
- Expanded Berrydesk's integration ecosystem by building OAuth connectivity with WhatsApp, Slack, Discord, Google Drive, Notion, and Stripe, enabling agents to interact with external business tools and data sources.

ReactJS Developer - Intern

CCS Technologies

February 2025 - June 2025, Kochi, Kerala

- Developed custom SPFx and React web parts for client SharePoint environments, translating business requirements into workflow-specific internal applications.
- Improved usability and access to enterprise data by building responsive interfaces integrated with SharePoint lists, document libraries, and data sources.
- Contributed to scalable client solutions using reusable React components and structured SharePoint integrations designed for maintainability and performance.

PROJECT

Ideal Path Estimation For Flight Trajectories

github.com/prathik-p/flight-dash • December 2024 - April 2025

- A research-driven project focused on estimating optimal flight trajectories using Inverse Reinforcement Learning (IRL) and Deep Imitation Learning algorithms.
- Leveraged real-world flight trajectory datasets to train and evaluate models, aiming to replicate expert flight paths under varying conditions.
- Developed backend models using TensorFlow and PyTorch, implementing custom neural network architectures for trajectory prediction.
- Designed a responsive React.js frontend to visualize predicted vs. actual flight trajectories, supporting user interaction and real-time comparisons.

AI Speed Detection - Surveillance Camera

github.com/UnparallelStudios/ai-speed-frontend • March 2024 - October 2024

- Developed a comprehensive speed detection application leveraging surveillance camera footage to monitor vehicle speeds and automatically capture license plate information.
- Integrated real-time video streaming functionality, allowing users to view live footage from multiple surveillance locations within the application using WebSockets.
- Implemented YOLO V8 and BYTETRACK to accurately detect and monitor moving vehicles in the video stream.
- Designed an intuitive React.js based user interface to display real-time and historical vehicle and license plate data within the application.

EDUCATION

BTech in Artificial Intelligence and Data Science

Rajagiri School of Engineering and Technology • Kochi, Kerala • 2025

SKILLS

Reactjs - Nodejs - MERN, NextJS, Databases - Postgresql, MongoDB, MYSQL, Python, Javascript - Typescript, Flutter - DART, Sharepoint - SPFx, Prisma, Twilio, SIP Trunking
